

2020 Primary Care Provider Quality Improvement Program Summary of Measures

For the tables below, please refer to these notes:

1: For all the clinical measures, the full-point target is set at the 50th percentile performance, with no partial points and no points earnable through relative improvement.

2: For the clinical measures, no points are able to be earned through relative improvement.

3: All clinical measures except Colorectal Cancer Screening use as targets the performance percentiles obtained from the National Committee for Quality Assurance (NCQA) national averages for Medicaid health plans reported in 2019. The Colorectal Cancer Screening targets are based on the 25th percentile plan-wide performance from the 2019 QIP, as NCQA data for Medicaid is not available.
