

Data Sharing and Collective Medical:

As part of the CalAIM initiative and to achieve the systematic coordination of services and comprehensive care management, PHC has collaborated with Collective Medical to provide a data and information exchange platform. This will help with coordination and standardization of the ECM and ILOS benefits as well as meet the DHCS requirements.

PHC's contracted ECM and ILOS providers will utilize this platform for a wide-variety of functions such as managing member case management communication functions, patient assignment and engagement, Release of Information (ROI), member consent, care plan submissions, and Emergency Room and Inpatient Admission notifications and alerts.
